Summary

Full-stack developer skilled in MERN and the Next.js, TypeScript, PostgreSQL, Prisma stack, with hands-on production experience. Built three full-scale platforms – a ride-booking system, a quick-commerce app, and an AI-powered virtual assistant – covering authentication, real-time tracking, payments, and generative AI integration, backed by 600+ DSA problems solved.

Projects

Saarthi

May 2026 – Jun. 2026

Next.js, TypeScript, PostgreSQL, Prisma, Socket.IO

[Live](#) | [GitHub](#)

saarthi-nextjs.vercel.app | github.com/Prajwal-dev-dsa/Saarthi

- Architected and built a production-grade ride-booking platform supporting User, Partner, and Admin workflows. Replicating a real-world, production-grade transportation ecosystem.
- Implemented secure authentication via Google OAuth and email OTP verification (Nodemailer), and designed a strict 7-step Partner onboarding pipeline – document verification, bank details, and live video KYC – reviewed by Admins in real time using Socket.IO.
- Built an end-to-end ride flow with live map tracking, OTP-based pickup/drop verification, AI-powered in-app chat suggestions (Gemini API), Razorpay payments, and an Admin analytics dashboard (Recharts) backed by PostgreSQL (Supabase) and Prisma ORM.

Zestro

Nov. 2025 – Jan. 2026

Next.js, TypeScript, MongoDB, Socket.IO, Stripe

[Live](#) | [GitHub](#)

zestro-zeta.vercel.app | github.com/Prajwal-dev-dsa/Zestro

- Developed a full-stack grocery delivery web application (inspired by Blinkit and Instamart) with dedicated User, Admin, and Delivery Partner roles to replicate a real-world quick-commerce system.
- Built a complete ordering flow with category-based browsing, cart management, location-based address auto-fill, and dual payment options – Cash on Delivery and Stripe.
- Designed a real-time Admin panel with live order notifications and analytics (Recharts), and implemented live map tracking (Leaflet), real-time chat with AI-powered suggestions (Gemini API), and OTP-based delivery verification (Nodemailer).

AI Virtual Assistant

Nov. 2025 – Dec. 2025

MERN Stack, JWT, Cloudinary, Gemini API

[Live](#) | [GitHub](#)

ai-virtual-assistant-mern.onrender.com | github.com/Prajwal-dev-dsa/AiVirtualAssistant

- Built a full-stack AI-powered virtual assistant (MERN stack) that answers general queries and executes voice/command-based actions such as launching frequently used applications.
- Implemented secure JWT and bcrypt-based authentication with custom middleware, and integrated Cloudinary for image storage, enabling users to personalize their assistant with a custom name and avatar.
- Integrated the Gemini API to power the assistant's AI-driven responses and built a responsive UI with React.js and Tailwind CSS, leveraging AI-assisted tools to accelerate the development workflow.

Education

Netaji Subhas University

Sep. 2023 – Aug. 2027

Bachelor of Technology in Computer Science and Engineering - **CGPA: 9.00/10.0**

Pokhari, Jamshedpur, Jharkhand

Technical Skills

Languages: C++, JavaScript, TypeScript, SQL

Frontend: HTML5, CSS3, Tailwind CSS, Bootstrap, React.js, Redux, Zustand, Next.js

Backend: Node.js, Express.js, REST APIs, WebSocket

Database: MongoDB, Mongoose, PostgreSQL, Prisma, Supabase, Firebase

Tools & Concepts: Git, GitHub, Postman, Socket.IO, JWT Authentication, Cloudinary, Generative AI Integration (Gemini API)

Relevant Coursework

Data Structures & Algorithms, Operating Systems, Database Management Systems, Object-Oriented Programming, Computer Networks

Achievements

- Solved **600+** Data Structures & Algorithms problems across LeetCode, GeeksforGeeks, and Coding Ninjas, including **300+** problems on LeetCode alone.
- Ranked among the **Top 5** problem solvers at Netaji Subhas University on GeeksforGeeks, based on overall DSA coding score.
- Won **1st Prize** in a college-level Debugging Competition, showcasing strong problem-solving and technical troubleshooting skills.
